# Sai Prakash Sirapu

Conversational AI | Chatbot/Voicebot developer | IVR | Cognitive Implementation Engineer | Amelia.ai  
Bengaluru, Karnataka, India

## Summary

Hi, here's a bit about myself.

After getting some coding experience in an Python and being a self-taught developer for months, I finally decided to leap into the software development industry . These days, I have been building projects using JavaScript, React, HTML and CSS.

I am the kind of person who likes to learn something new every single day. I like to try out different technologies/languages like JAVA and GROOVY . I believe there's always room for improvement and would love to work at a company where they have a similar mindset.

At the end of the day, I will do my best to solve your problems and stick to my commitments no matter what. #

When I am not coding, I like to listen music and play guitar. After I am done with that, I like to spend the rest of the time listening to audio books watching interesting videos on historical icons and Armed Forces.
